A12 Cabinet Plots by Country	A83

A1 Coding Corrections to GWF Regime Type, Elections, and Failed Coups

WhoGov’s collection of cabinet data at the beginning of July each year complicates the coding of regime type and the Election and Failed coup variables. Each of these variables cannot be merged on a country-year basis without errors. Below, we explain the coding corrections made for regime type, elections, and failed coups.

We use Geddes, Wright, and Frantz’s (2014) (hereafter, GWF) data to identify our sample of autocracies in sub-Saharan Africa. However, the country-year coding procedure for regimes used by GWF is not perfectly compatible with the cabinet observations each July from WhoGov. When merging these datasets by country-year, errors sometimes occur in years where one regime exits and another begins. This is because the country-year version of GWF records regimes as beginning on January 1 after the actual regime change date. For example, a regime that begins on August 1, 2000 would not show up in the GWF country-year data until 2001. In that example, a country-year merge with WhoGov would be correct. However, if the true regime start date was March 1, 2000, the country-year merge would fail in 2000. The WhoGov cabinet observed in July 2000 would be merged with the GWF regime from 2000 which would have already exited power in July. Since GWF record the true start and end dates of regimes, we are able to correct these problematic cases, ensuring that the cabinet observations are matched up with the appropriate regime.

A similar issue occurs with the coding of elections and failed coups. We recode the timing of elections and failed coup attempts that occur in year t but prior to July as occurring in year $t - 1$. This coding reflects the assumption that cabinet reshuffles can only be attributed to elections and failed coup attempts if they take place directly following these events. Consider the following example:

Minister X is present in the cabinet in 2005, but not in 2006. Under our coding scheme, Minister X is coded as exiting the cabinet in 2005. Now, assume that Minister X’s country held an election in February of 2005. If Minister X was dismissed following the election in February of 2005, they would not have been recorded as a cabinet member in 2005 since the observation is taken at the beginning of July. As such, we code the election as taking place in 2004. This prevents the dismissal of Minister X in 2005 from being attributed to the election. If, however, the 2005 election had taken place in September of 2005, the election year would remain coded as 2005.

A2 Descriptive Statistics

A2.4 GWF Balanced Sample

The balanced sample selects countries with periods of time continuously defined as autocracies by Geddes, Wright, and Frantz (2014) up to the end of the Cold War and retains those countries in the sample until 2010, even if they transition to democracy. ¹

A2.5 CWE Surviving Leaders Sample

Defining leaders as surviving the Cold War end (CWE) period is not straightforward. As such, we adopt a conservative approach. We define the sample of CWE surviving leaders as leaders with at least three years of tenure before the beginning of our CWE period (1988) and at least three years of tenure after our CWE period (1992).

Table A16: CWE Surviving Leaders, GWF SSA Sample

Country	Leader	Start	End
Angola	Jose Eduardo Dos Santos	1980	2010
Botswana	Quett Masire	1980	1997
Cameroon	Paul Biya	1983	2010
Congo - Kinshasa	Joseph Mobutu	1966	1996
Gabon	Omar Bongo	1968	2008
Ghana	Jerry John Rawlings	1982	2000
Guinea	Lansana Conte	1984	2008
Guinea-Bissau	Joao Bernardo Vieira	1981	1998
Kenya	Daniel T. Arap Moi	1979	2002
Senegal	Abdou Diouf	1981	1999
Togo	Gnassingbe Eyadema	1967	2004
Zimbabwe	Robert Mugabe	1981	2010

Note: Leader start and end years reflect cabinet observations in our dataset.

A3 Models of Minister Survival Across Samples and Specifications

A3.1 Pooled Logit Models

The average marginal effects plotted in Figure 3 of the main text are calculated using Model 1 in Tables A17, A18, A19, and A20. We create Figure 4 in the main text using Model 1 in Table A20. In each table, Models 2-6 estimate the same specification in Model 1, but using samples with alternative definitions of autocracy and different subsets of countries. The column labels indicate the sample used. Descriptive statistics for each sample are in Section A2
